FAQ No.2016

How to change Windows 10 UI (User Interface) language?

Affected Model: All

Q: How to change Windows 10 UI (User Interface) language?

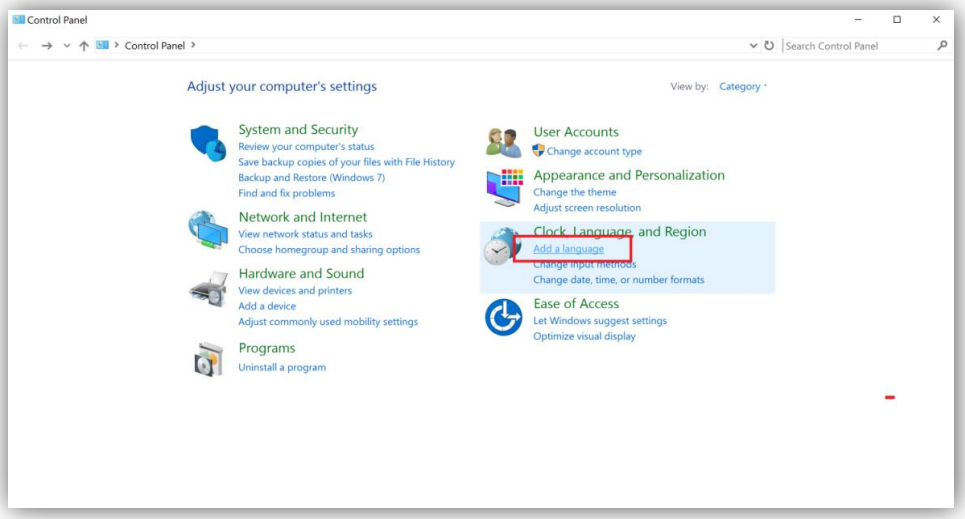

A: Please follow the steps below to change the UI language which your preferred.

Warning: If your Windows system is Windows SLP (Single Language Pack). There will be only default language and it can't change to multi language as this guide.

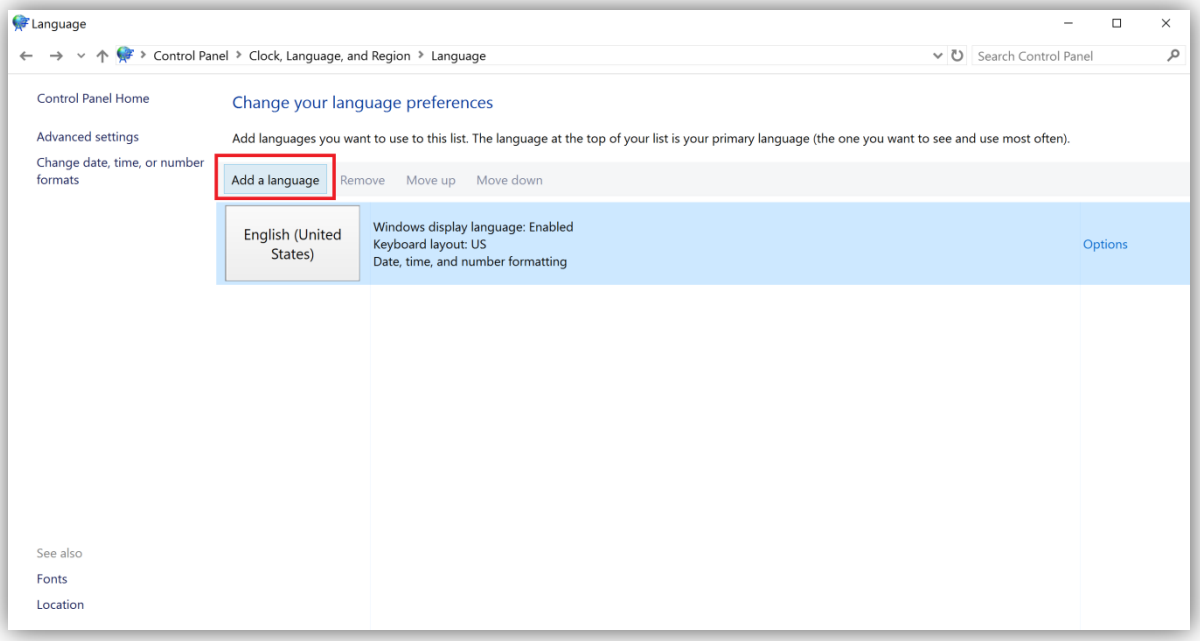

1) Right click on [Windows Key] and select [Control Panel].

2) Choose [Add a language] in cortol panel.

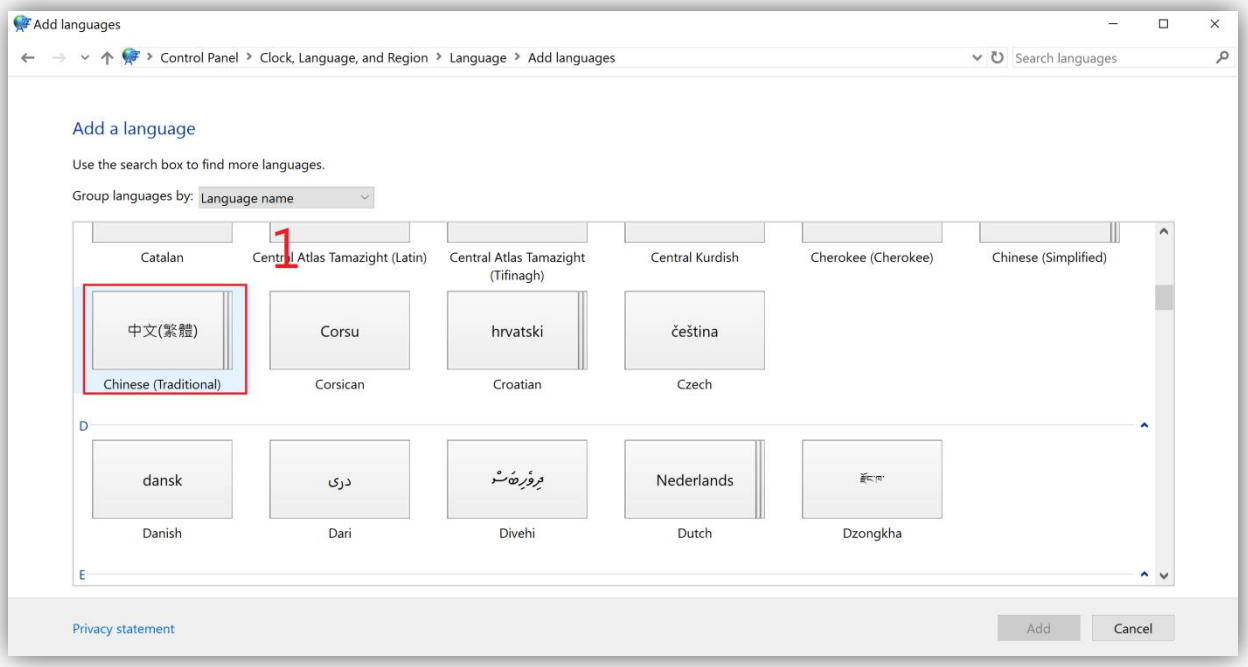

3) Check the language list first. If your Windows system do not have the langaue which your preferred. Please select [Add a language] to continue.

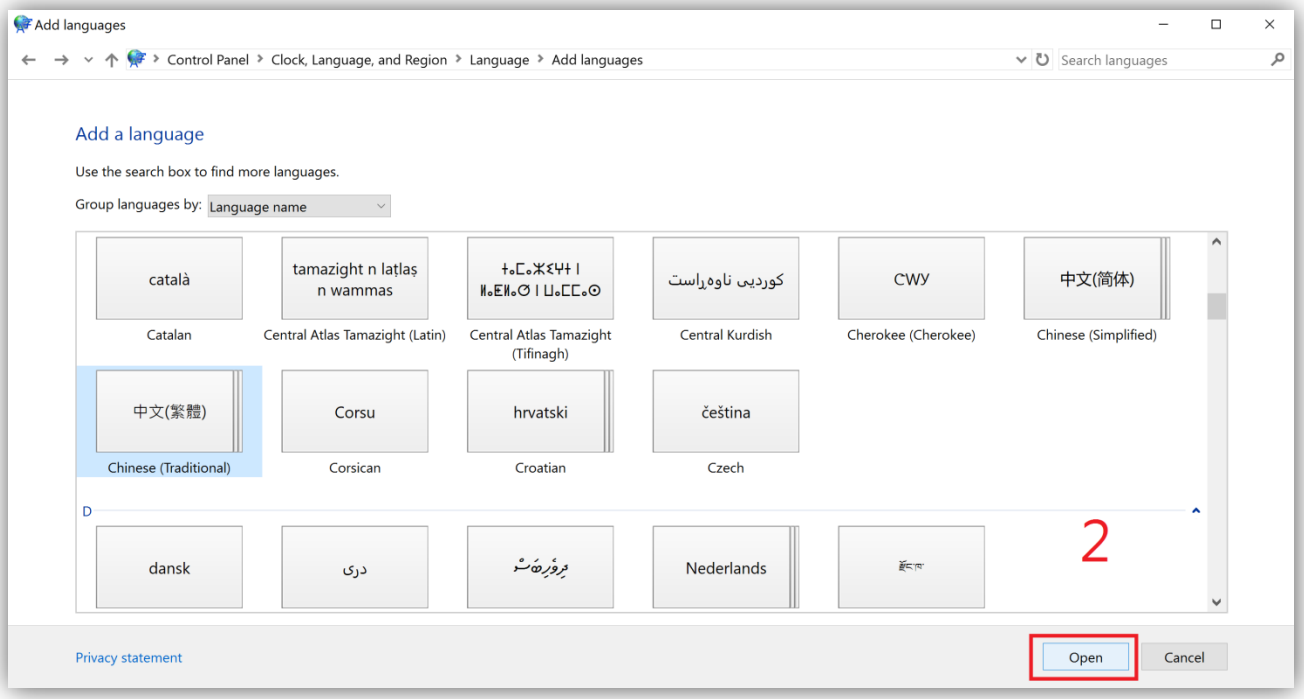

4) For example: Following will guide you to select [Chinese (Traditional)] for your MSI notebook.

4.1) Select the main language.

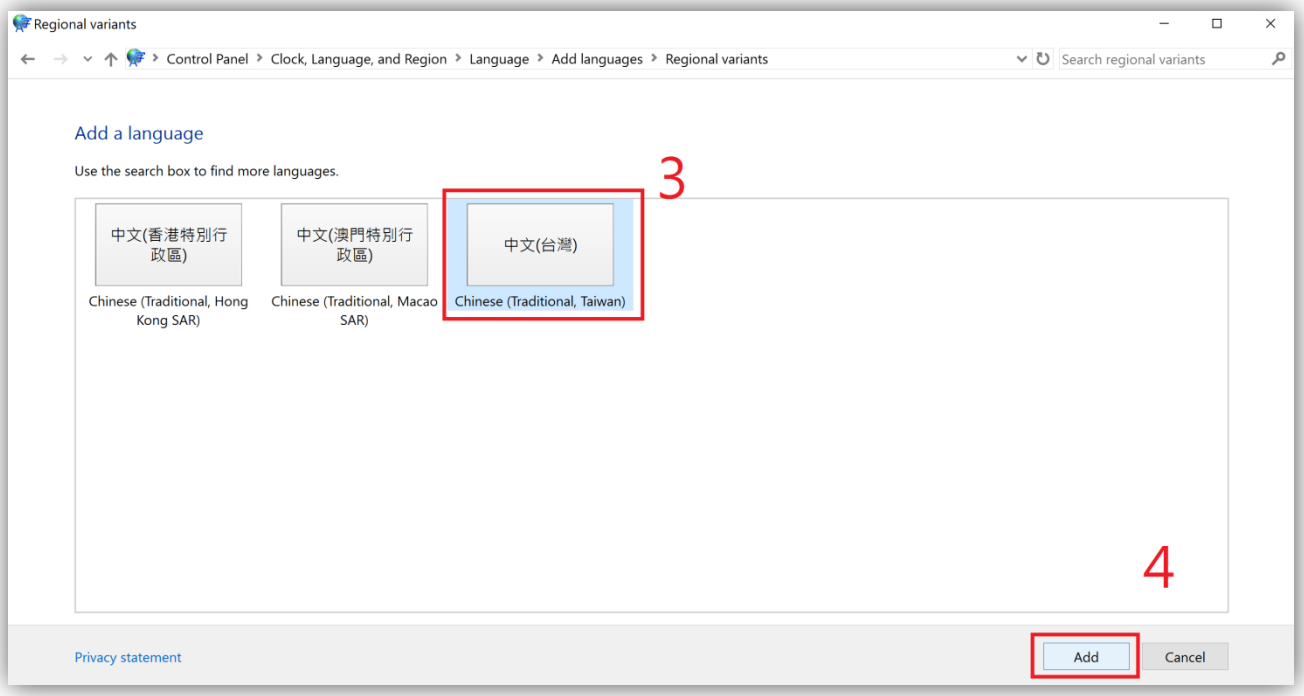

4.2) Choose [Open] to continue.

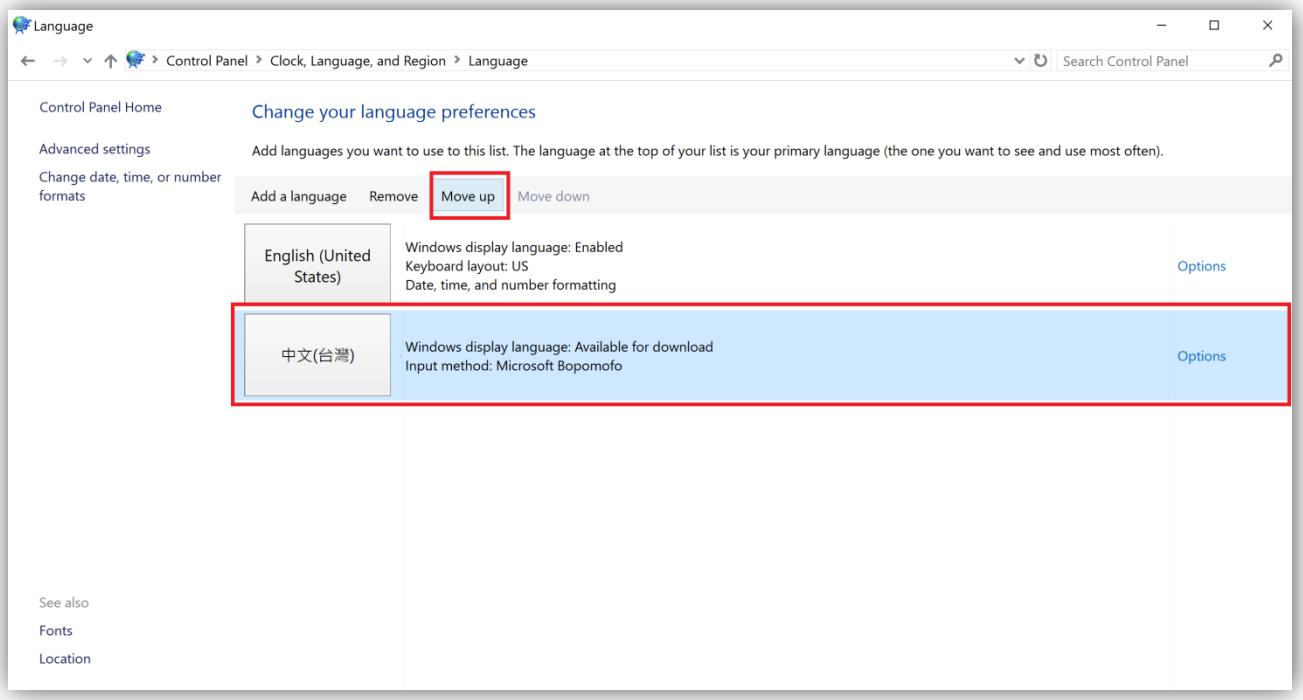

4.3) Select your language.

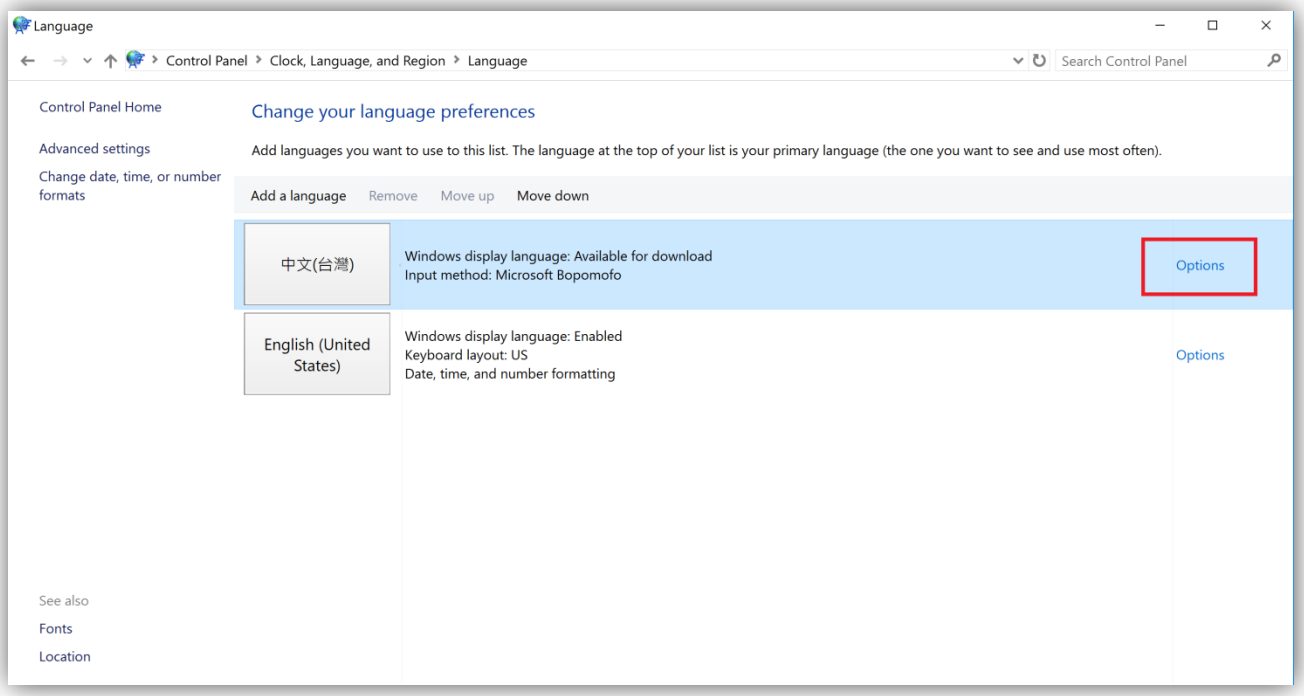

4.4) Click [Add] to put the language to WInodws language list.

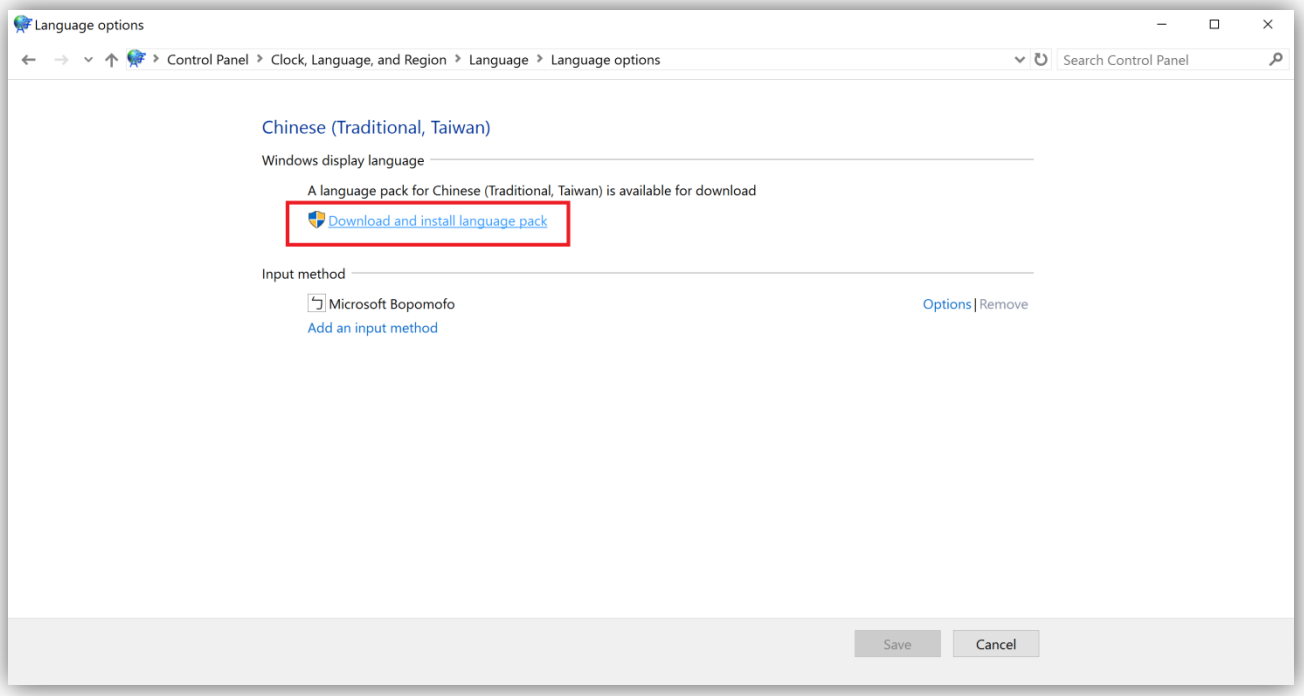

5) Set the primary language by [Move up] and [Move down]. In this case, we will move up [Chinese (Traditional)].

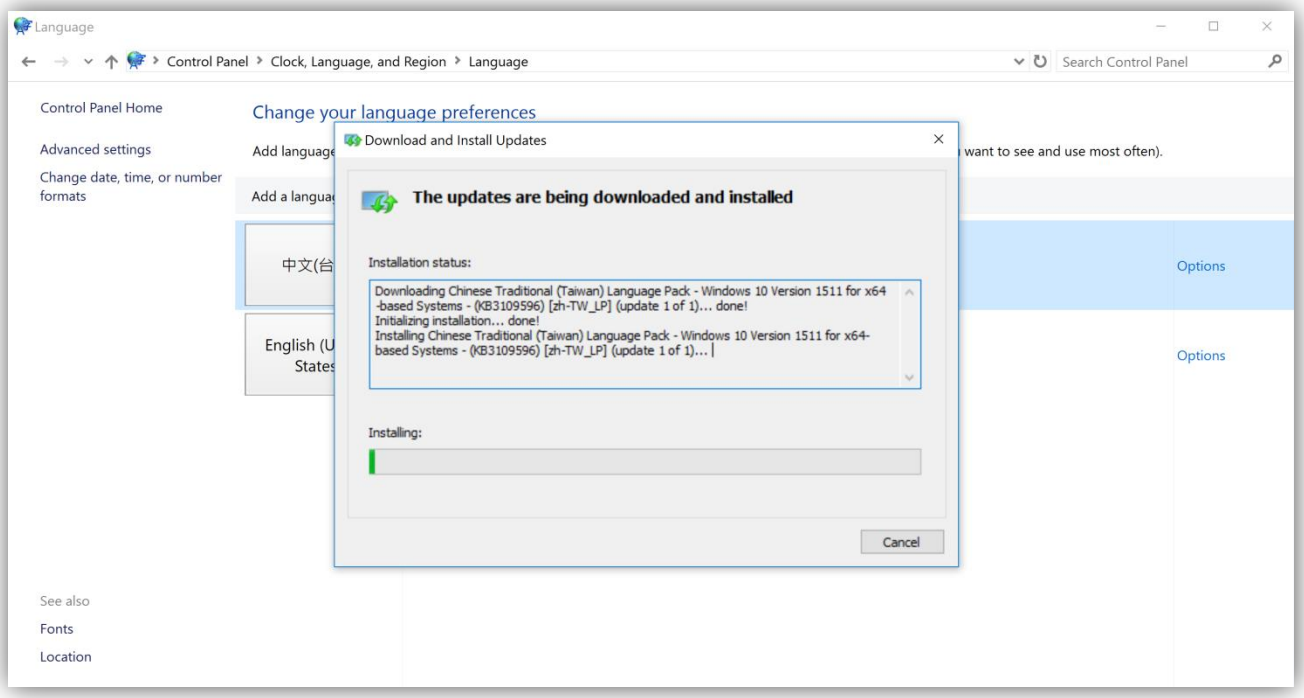

6) Select [Options] to configure your display language and input method.

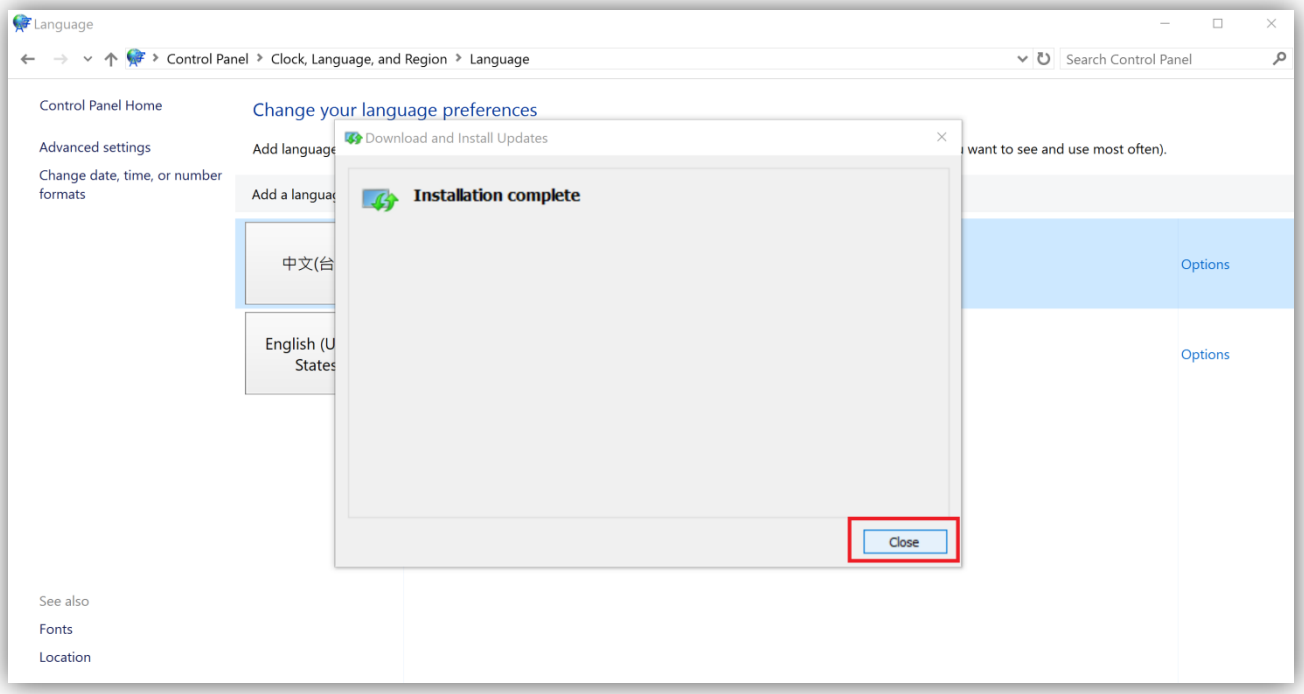

7) If you don’t have the language pack, please download and install it as below.

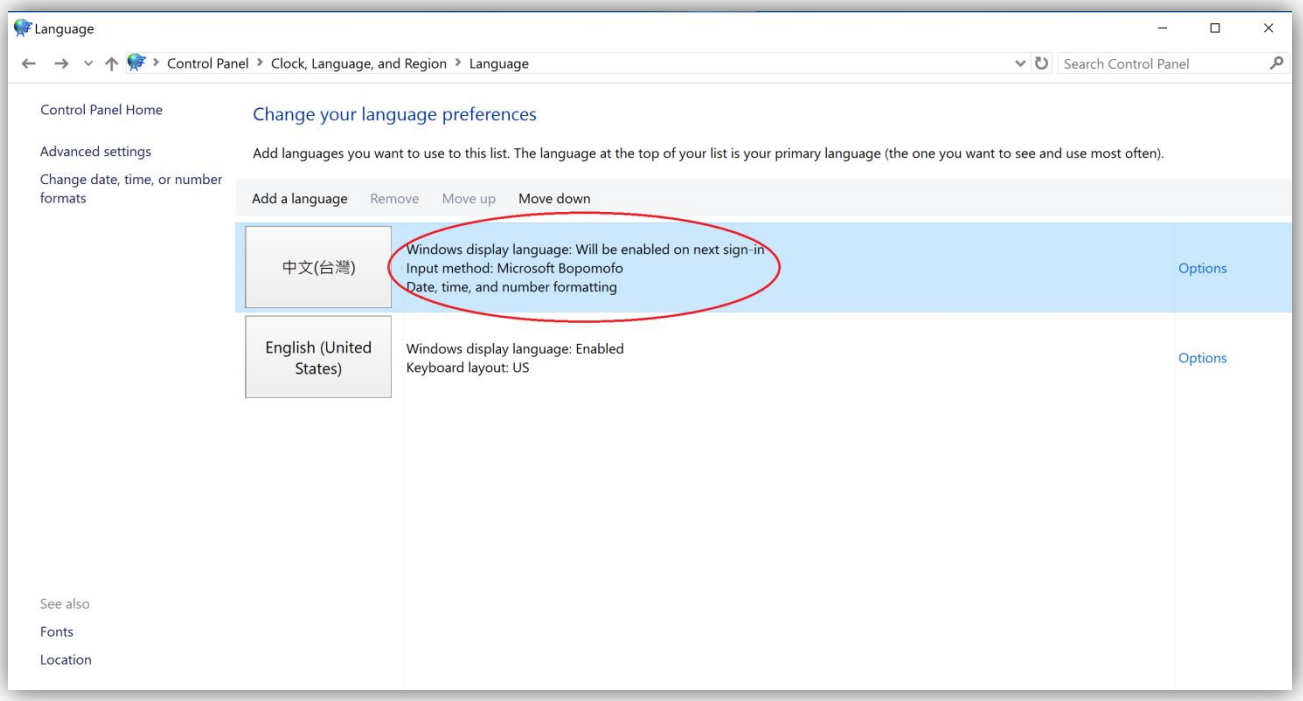

8) Click [Close] to finfish the installtion of language pack.

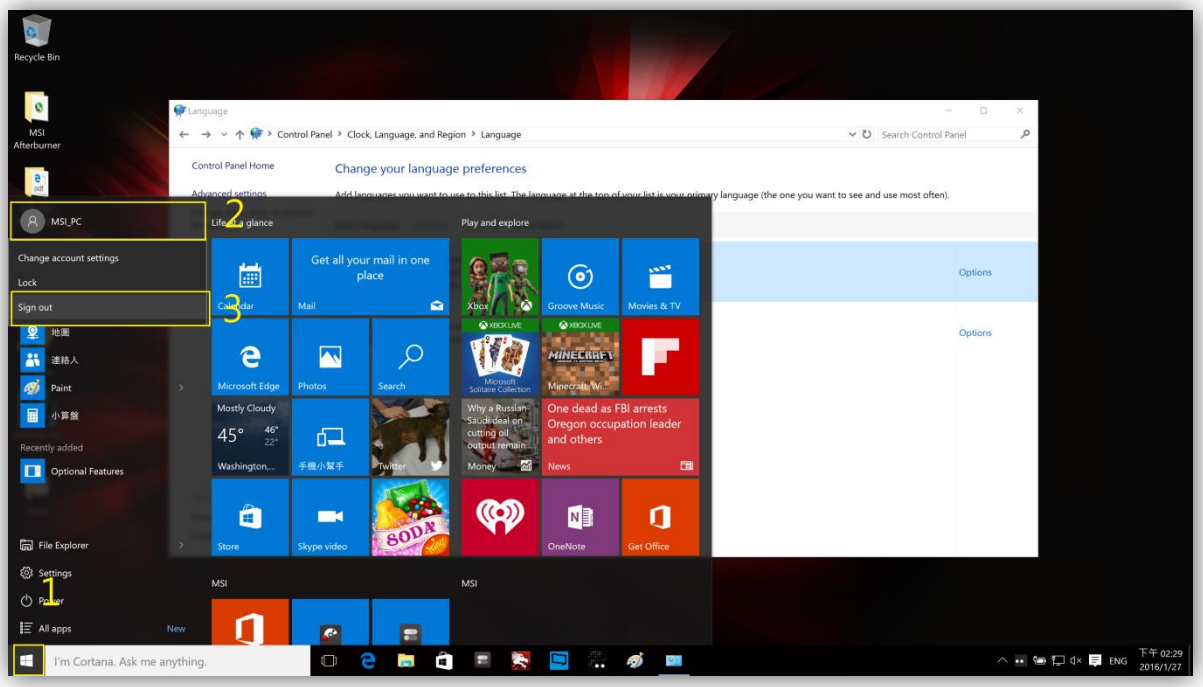

9) Please note the system has to [Log off] to make the new UI settings work. Windows display language will be enabled on next sign-in.

9.1) Left click on [Windows Key].

9.2) Click on your personal account.

9.3) Select [Sign out] to log off.

10) After login again, Windows UI language will change to new setting.
