

How to remove language package in Windows

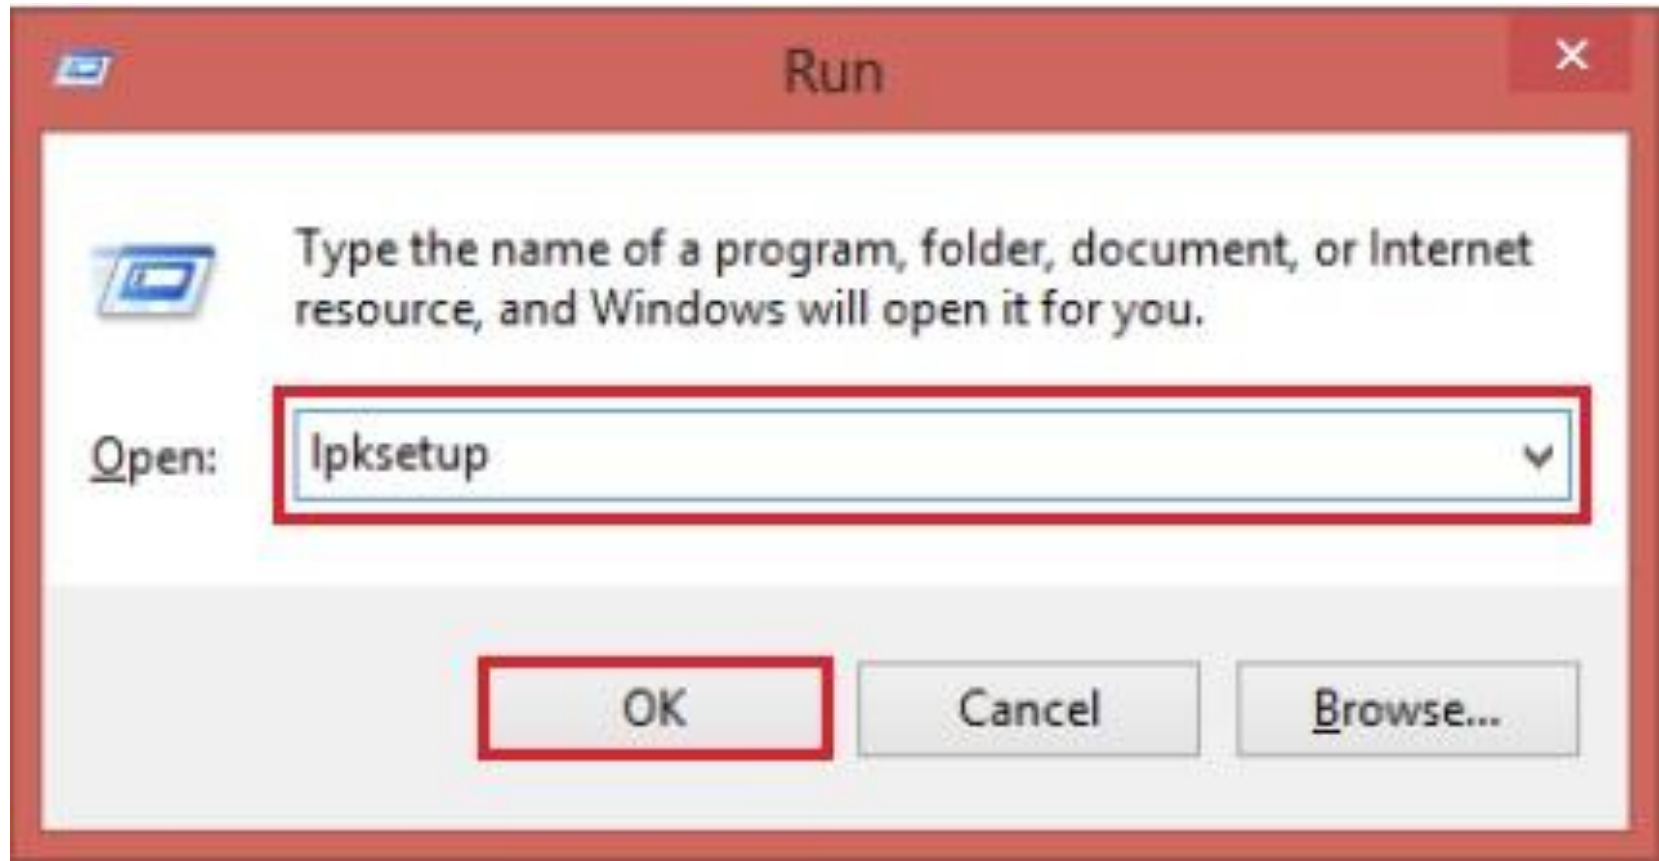

Due to OEM OS Image apply multiple language package for many countries. When PC in idle status (Around **10** min), Windows will begin to optimize for the best performance. Then system loading become heavy, to remove additional language package in system.

In here, we will teach user manually remove language package to avoid the situation.

Step 1 – Type command to call program

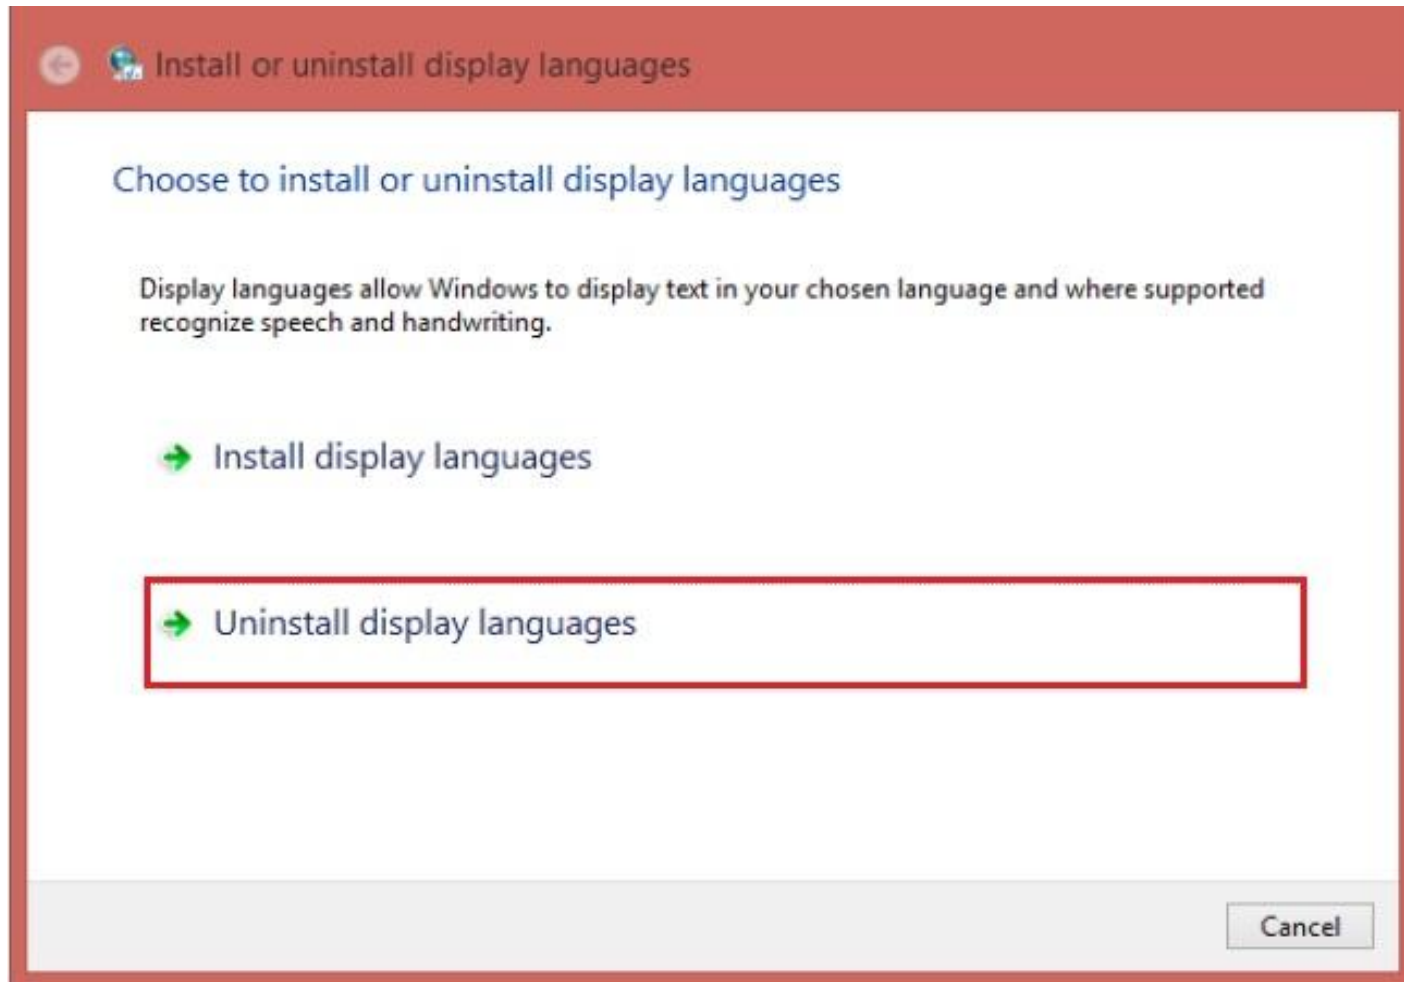

1. Press keyboard **“Windows”** + **“R”** then it will pop a windows **“Run”**
2. Type **“lpksetup”** and press **“OK”**

Step 2 – Uninstall the language package

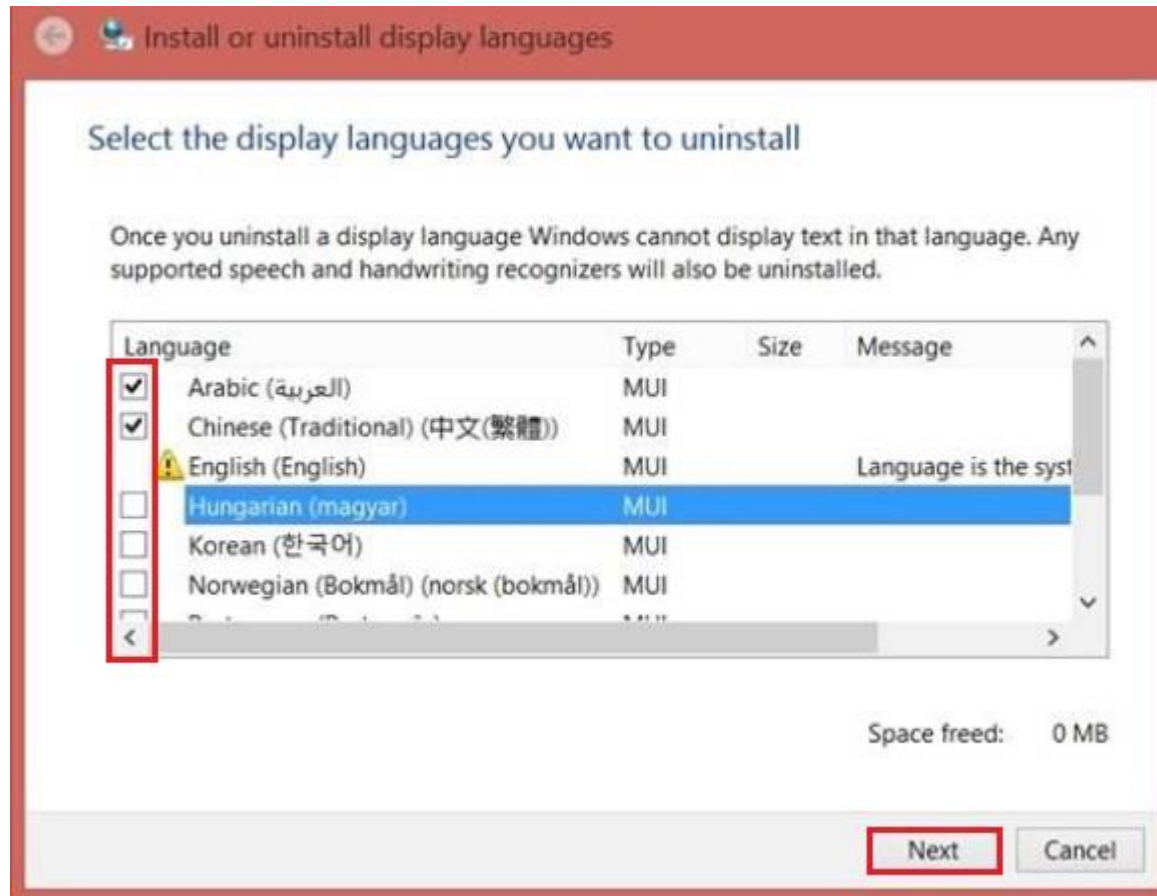

3. It pops a windows “Install or uninstall display languages”
4. Click “Uninstall display languages”

Step 3 – Select the language doesn't use

5. To check the language you don't need. Then press “**Next**”.
6. After process finish, please restart PC. It will takes time for optimization.

Noted: If you remove **5 language packages** it takes **10 min**.

Sp for the recommendation, it better remove language package at night.

**Thanks for
your attention**
