## Step 1. Open Mystic Light program

You can find the MysticLight program in “**MSI folder**” in “**Windows program files**” or search key words “**MysticLight**” to open program.

## Step 2. Setup Mystic Light for your system

Mystic Light program will support MSI accessories in future.

Currently, it only support **individual mode**.

So please select “**Individual**”. Then it will show up desktop icon in “**Device Setting**” and Press “**Setting**” to setup page.

## Step 3. choose light effect you like

In light effect, we can choose light mode for RGB LED display. To confirm the effect you like, then press “**Apply**” & “**Save**”. The **profile** will be saved. Next time you can choose the profile directly for light effect display.

1. The maximum profile can support **3** profile.
2. When we choose light effect in “**No Animation**”, we can setup specific position of system for RGB LED light on. In LED Area, user can setup the LED light position of system to light on. To choose the position first then setup the color.
3. **Light Speed** & **Brightness** doesn't support yet.
4. Different product will show different **desktop icon**, but the operation way is the same.
