

[How To] Install Tobii Aware

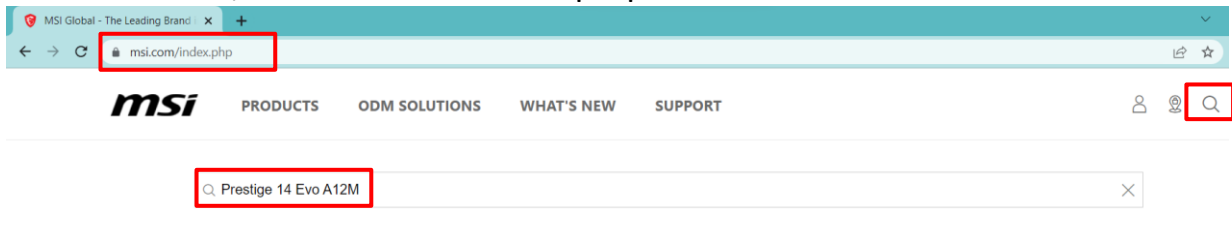

Tobii Aware has been introduced on MSI 12th Gen Summit and Prestige Series laptops, which can be a useful software to keep the data on the notebooks safe.

On Windows 10 21H1 or later or Windows 11, the system uses the infra-red camera on the laptop to detect the user's eye movements and provides privacy and security based on different scenarios.

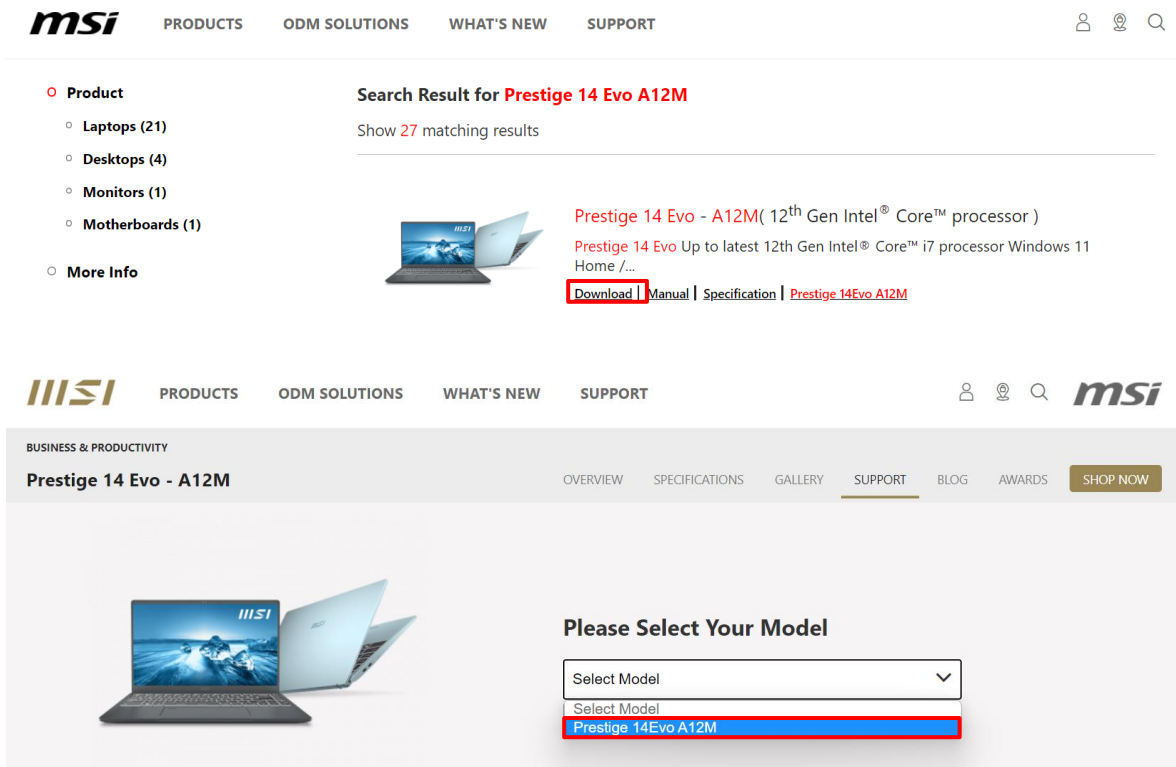

To use the features in Tobii Aware, the Tobii Experience App is required on the system.

Refer to the steps below to install the program.

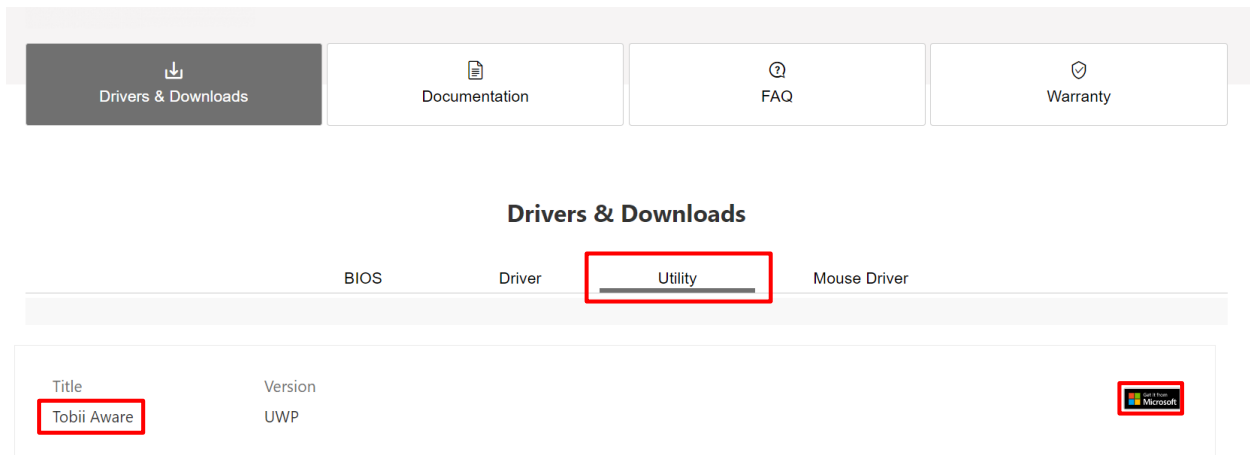

1. Before starting, first check if the laptop supports Tobii Aware. Go to MSI.com, then search for the laptop model.

2. Click on Download, then select the correct model.

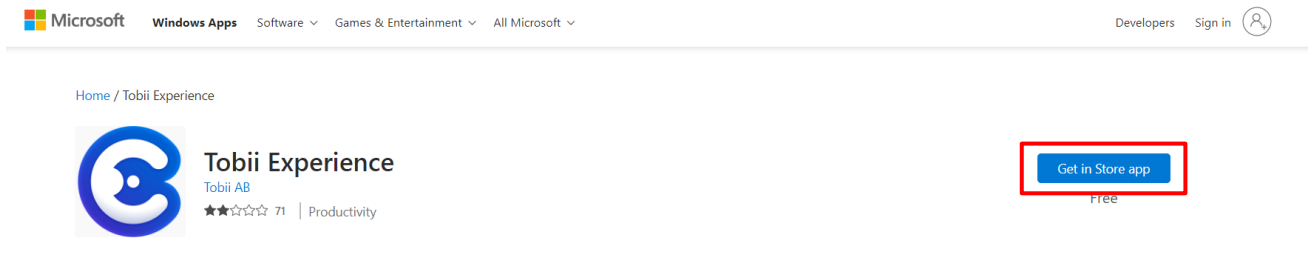

3. Go to the Utility tab, then look for “Tobii Aware” and click on the download button.

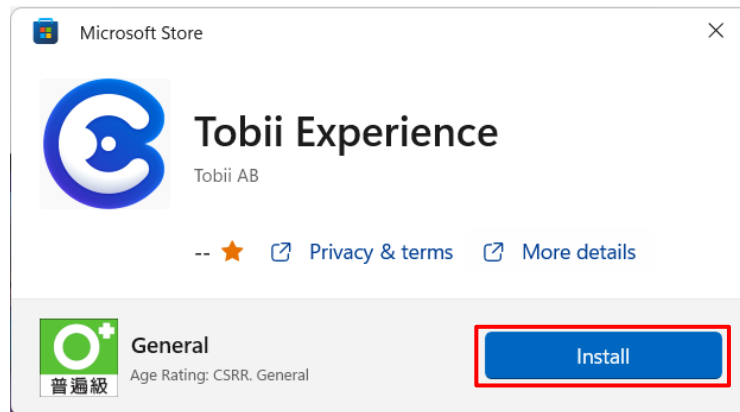

Note: If Tobii Aware is not available, it means that the laptop does not support it.

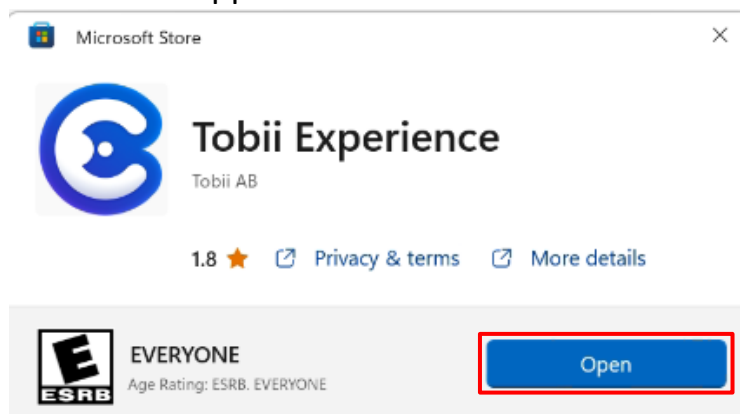

4. Click on the button to open Microsoft Store.

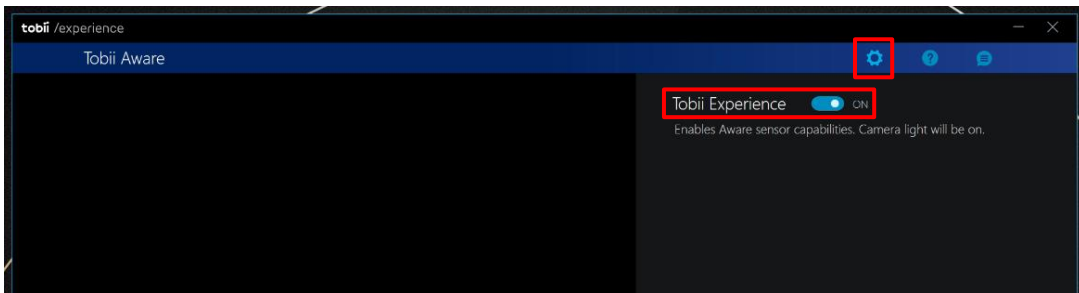

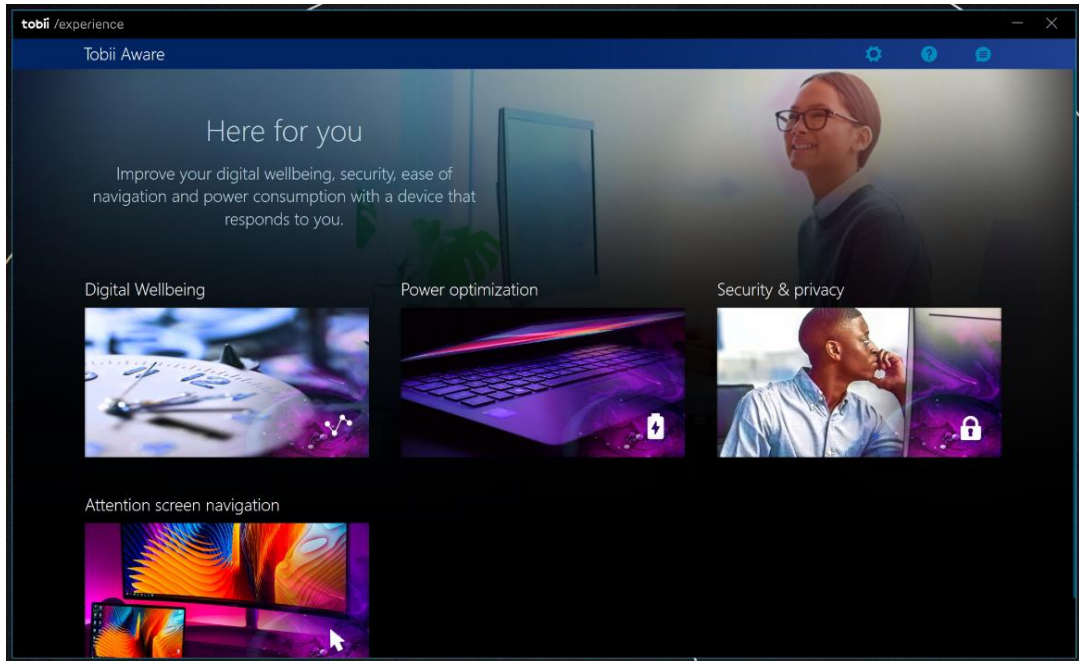

5. Click on Install. This will install the software and its driver.

6. Click on Open to launch the App.

7. Follow the on-screen instructions, then enable Tobii Aware in the settings to start using its features.

8. If an uninstallation is required, go to Windows Apps settings and remove the software and its driver.
